

DEVELOPMENT OF ADVANCED PRODUCTS AND PROCESSES. UPSCALING

Innovation in the whole loop – From the raw materials to the industrial product ready for the market

FORMULATIONS

Design and production of tailor-made formulations to generate foamed materials with advanced properties. We consider both the modifications of the cellular structure and the modifications of the polymer matrix composition

UP-SCALING

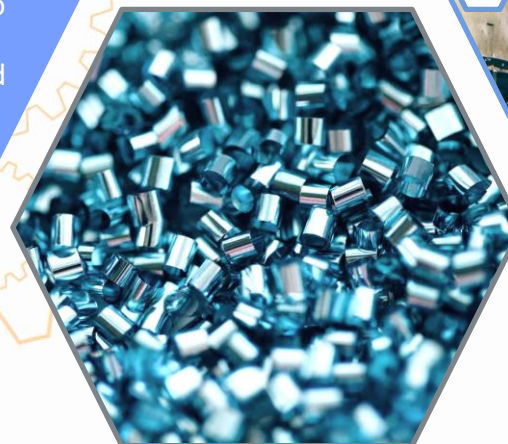

We offer a full consultancy service in the up-scaling of your process – from helping in the design of equipment to adjusting formulations and processing conditions to meet the new scale demands

RAW MATERIALS

We help in the selection of raw materials for specific foaming applications. We can test and validate polymers with good foamability, efficient nucleating agents, and chemical or physical blowing agents

LIGHTWEIGHTING

We provide solutions based on different technologies and specialized formulations to reduce weight in your foams or even in your solid materials
